Geo-Net

Erosion Control Solution

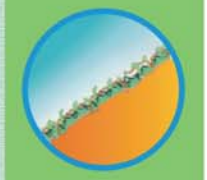

Advantages:

- Flexiable to the irregular slope surface
- High strength and stress
- Large opening for the growth
- Thin layer to allow creeping creeping plant

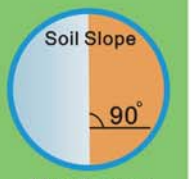

Feature:

Geo-Net is also called the enforced polyester-fibricated grillage for soil engineering. The structure of this product is formed by warp knitting technology. In which each enforced polyester yarn is aligned in grid, formed into secure and strong crunodes without curvature. As a result, the physical and mechanical performances of the warp knitted textiles is more superior than any other fibrics which is ideal on erosion control system.

Vegetation Objective

Maximum Application Gradient

Erosion Control

Prefabricated Seed & Fertilizer

Maintenance Free

Properties

Rate of Elongation	Strength (kN/m)	Width (m)	Grid Size (mm)
13%	Longitudinal 50 Transverse 50	2-6	25±3
