GREEN ROOF SYSTEM

Green Roof System is a system comprising fiber soil as growing medium for plants, drainage composite layer, root barrier, irrigation system and plants at the roof area. The Green Roof System benefits the Building Owners both ecologically, economically and recreationally.

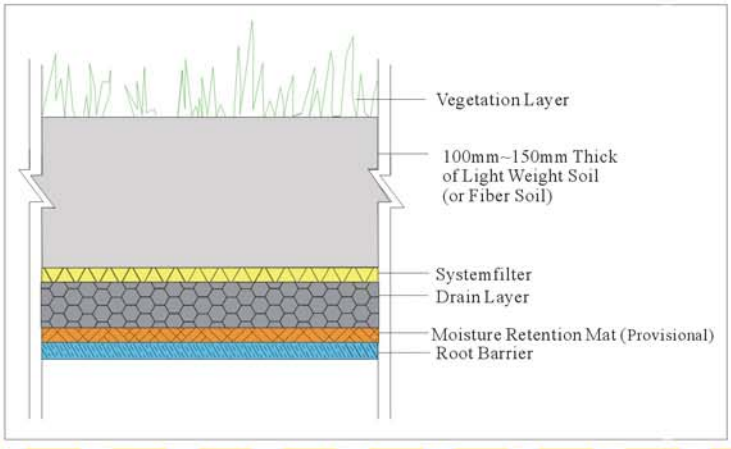

ADVANTAGES

* Storm water management
* Recycling of nutrients
* Processing of airborne toxins
* Reoxygenates the air
* Provision of wildlife corridors
* Increase energy efficency of building
* Increased useable space for tenants
* Increased property value for owner
* Creates therapeutic and peaceful environments for hospitals
* Absorbs external noise pollution
* Improvement towards quality of life
* Increase in aesthetic appeal
